### **Anchor Rods - AISC Home**

AISC has changed its terminology to anchor "rod" to eliminate confusion between structural bolting applications, such as those covered by the AISC and RCSC Specifications, and anchorage applications between steel members and concrete elements. This includes such issues as installed tension, slip resistance, and hole sizes, which do not apply in anchor-rod applications as they are covered for all-steel bolting applications.

engagement of anchor rod nuts. EVERY ANCHOR ROD has its limit. Here, we'll discuss the limit state of thread stripping in threaded steel anchor rods (anchor bolts), used with nuts, for diameters, D, from 0.5 in. to 4 in. Internal threads (nuts) or external threads (threaded rod) could strip under certain conditions. This limit state can usu-

The dispute arises from differing tolerances for anchor bolt placement given by the concrete industry in ACI 117-90, "Standard Specifications for

Tolerances for Concrete Construction and Materials,” and by the steel industry in the AISC “Code of Standard Practice for Steel Buildings and Bridges,” 2000.

A general rule of thumb is given in AISC Design Guide #10 Erection Bracing of Low-Rise Structural Steel Frames 1: the minimum thickness should be one-third the diameter of the anchor rod and that the minimum diameter (or length and width for a non-circular washer) should be 1-in. larger than the hole diameter. When the anchor rod transmits tension, the washer size must be sufficient to transmit the force to the base plate.

High-Strength bolts range in diameter from ½ to 1 ½ in. For bolts larger than 1 ½ in the AISC allows the use of ASTM A449 provided that they are not used in slip-critical connections. b) Unfinished Bolts These bolts are made from low-carbon steel, designated as ASTM A307, and

The ASTM specification allows F1554 anchor rods to be supplied either straight (threaded with nut for anchorage), bent or headed. Rods up to approximately 1 in. in diameter are sometimes supplied with heads hot forged similar to a structural bolt. Thereafter, it is more common that the rods will be threaded and nutted.

AISC Specification section J3 deals with high-strength bolted connections between two steel members. It does not apply to connections between steel and post-installed or cast-in-place anchor rods. That's why AISC calls them anchor "rods" and not anchor "bolts."
