Physical. CAN is a multi-master serial bus standard for connecting Electronic Control Units (ECUs) also known as nodes. (Automotive electronics is a major application domain.)Two or more nodes are required on the CAN network to communicate. A node may interface to devices from simple digital logic e.g. PLD, via FPGA up to an embedded computer running extensive software.

**CAN bus - Wikipedia**  
CAN bus with flexible data-rate (CAN FD) is an extension of the Classical CAN data link layer. It increases the payload from 8 to 64 bytes and allows for a higher data bit rate, dependent on the CAN transceiver.
