T his chapter presents a discussion of impacts of uranium mining and processing operations on air quality, soil, surface water and groundwater, and biota. Much is already known about the environmental impacts of mining, both on-site and off-site, and that body of information provides a basis for this chapter.

6 Potential Environmental Effects of Uranium Mining ...

An example of taphonomic study in action comes from Iron Age England (circa 750 B.C.E. to 43 C.E.). The Iron Age in southern England has a rich and diverse burial record. Since there is no universal or "normative" burial rite, taphonomic study is crucial to figuring out what cultural and ritual processes were operating at this time.

Agglutination of Bacteria and Viruses. The use of agglutination tests to identify streptococcal bacteria was developed in the 1920s by Rebecca Lancefield working with her colleagues A.R. Dochez and Oswald Avery. [1] She used antibodies to identify M protein, a virulence factor on streptococci that is necessary for the bacteria's ability to cause strep throat.
