Hitachi Universal Replicator is Hitachi's solution to async replication. Their implementation thought is a bit different then other solutions like EMC's recoverpoints. Yes, they do use journals as well, but they will only use them if needed.

## **Guide for VSP G series and F series**

Universal Replicator provides a powerful data management and recovery solution that replicates mission-critical data to one or more remote sites. Universal Replicator significantly reduces resource consumption and sets the standard for data protection.

## Hitachi Universal Replicator User Guide

TrueCopy, and Hitachi Universal Replicator allow the user to define groups of replicated devices. Each replication device group requires an Oracle Solaris Cluster device group with the same name. Particular application-specific data might not be suitable for asynchronous data replication.

## **Hitachi Universal Volume Manager User's Guide**

Universal Replicator is functionally different from TrueCopy, using the concept of journal volumes on both local and remote systems to facilitate mirroring data. When a host updates the primary volume, the local system will have this

Replicator features journal disk caching for achieving tight RPO time capabilities, even in the event of a network outage.

Universal Replicator provides asynchronous remote copy, over any distance, for Hitachi VSP G series and VSP F series storage.
