Let x be a real number. If $0 < x < \epsilon$ is true for all real numbers $\epsilon > 0$, then $x = 0$. This statement is the general idea of what we do in analysis. If we wish to show that $x = 0$, we show that $0 < x < \epsilon$ for all positive ϵ . The term real analysis is a little bit of a misnomer. I prefer to use simply analysis. The other

Basic Analysis: Introduction to Real Analysis

In analysis, we usually prove inequalities, and we prove those inequalities by estimating. To illustrate the point, consider the following statement. Let x be a real number. If $x < \epsilon$ is true for all real numbers $\epsilon > 0$, then $x = 0$. This statement is the general idea of what we do in analysis. Suppose next we really wish to prove the equality $x = 0$.
