the equation for the line is $x = 6$. Example 4: Write an equation for the vertical line that passes through $(6, 2)$. Since the line is vertical, x is constant--that is, x always takes the same value. Since x takes a value of 6 at the point $(6, 2)$, the equation of the line is $x = 6$.

differential equation,
given here, $M(x, y) dx$
 $+ N(x, y) dy = 0$. This
is a first order
differential equation. If
this left hand side, is a
total differential of $F(x,$
 $y)$, then the
differential equation
can be written as,
because this left hand
side is a total
differential of capital F ,
so you can write is as,
 $dF(x, y) = 0$.

Writing Algebraic Equations - Math Goodies

The partial equation is
 $y = \frac{1}{2}x + b$ To find b ,
use either of the 2
given points and
substitute in the partial
equation. Using $(2, -8)$
with $x = 2$ and $y = -8$ (
 $\frac{1}{2}x + b = -8$)
 $\frac{1}{2}(2) + b = -8$
 $1 + b = -8$
 $b = -9$
The equation is " $y = \frac{1}{2}x - 9$ " is the
equation"
