Introduction. The human heart is one of the first organs to form and function during embryogenesis [1, 2]. By the end of gestational week 3, passive oxygen diffusion becomes insufficient to support metabolism of the developing embryo [3, 4, 5], and thus the fetal heart becomes vital for oxygen and nutrient distribution []. The initiation of the first heart beat via the primitive heart tube ...

Gonadotropin releasing-hormone analogs (GnRHa) First synthesized in 1980, GnRHa desensitize and down-regulate GnRH-receptors, suppress gonadotropin secretion, and eventually reduce gonadal hormones to pre-pubertal levels (9,11,22,23). Basically, the native GnRH molecule is modified at least at the glycine 6 position, where it is substituted by another amino acid resulting in a super-agonistic ...
