### Genetics in Harry Potter’s World: Lesson 2

Magic genes are portions of human DNA that determine whether a person will have magical abilities. Those people born with the genes active are witches and wizards, while those who are not are Muggles or Squibs. Magic genes are described as being "dominant and resilient."1 Squibs, while unable to use magic, are often still able to function within the wizarding world to a limited degree. The ...

Genetics can explain more in the "Potterverse" than just magical ability — like the Weasley family's signature hair color, for example. Red hair is caused by a mutation in the MC1R gene; but it's a recessive trait, which means it crops up only when the mutation is present in both sets of DNA that a child inherits. Arthur and Molly Weasley are both redheads, thereby ensuring that their ...
