Genetic recombination—the combining of gene segments from two different pathogens—is an efficient form of immune evasion. For example, the influenza virus contains gene segments that can recombine when two different viruses infect the same cell. Recombination between human and pig influenza viruses led to the 2010 H1N1 swine flu outbreak.

The domestic guinea pig (*Cavia porcellus*) has been bred in captivity for at least 400 years and probably originated in Peru, Argentina, or Brazil (Weir, 1974). Many laboratory guinea pigs were bred from a strain established by Dunkin and Hartley in 1926 (Dunkin et al., 1930). [See National Institutes of Health (1982) for other strains.] Unless otherwise indicated, the strain referred to in ...
