• A statistical model is an approximation to reality • There is not a "correct" model; - (forget the holy grail) • A model is a tool for asking a scientific question; - (screw-driver vs. sludge-hammer) • A useful model combines the data with prior information to address the question of interest. • Many models are better ...

Lecture 1 Introduction to Multi-level Models

Multilevel models • Multilevel models allow us to look at different levels simultaneously: e.g. the pupil level and the school level • Don't require a huge number of parameters. • Also allow flexibility: e.g .the relationship between exam score at 11 and exam score at 16 can be different in different schools

Multilevel Modeling An Introduction

An Introduction to Multilevel Models 1.1 Hierarchically structured data Many kinds of data, including observational data collected in the human and biological sciences, have a hierarchical, nested,orclustered structure. For example, animal and human studies of inheritance deal with a natural hierarchy where offspring are grouped within families.

An Introduction to Multilevel Models

Introducing Multilevel Modeling is shorter and slightly less 'mathematical' than most and gives quite a good introduction to the subject. The book makes reference to the British MLn (MLWIN) computer program in its examples, whereas an introductory text arguably should have used the HLM program, for which a cutdown student version is available free.

In this Stat's Amore Training, Marc Diener will help you make sense of the strange terms and symbols that you find in studies that use multilevel modeling (MLM). You'll learn about the basic ideas behind MLM, different MLM models, and a close look at one particular model, known as the random intercept model. A running example will be used to clarify the ideas and the meaning of the MLM ...
