Method overriding, in object-oriented programming, is a language feature that allows a subclass or child class to provide a specific implementation of a method that is already provided by one of its superclasses or parent classes. It allows for a specific type of polymorphism ().The implementation in the subclass overrides (replaces) the implementation in the superclass by providing a method ...

The cover art illustrates the molecular structure of the first iron-carbene complex with a square-planar coordination environment. This geometry induces an unprecedented intermediate-spin configuration for the iron-carbene unit. The orbitally near-degenerate paramagnetic ground state exhibits large unquenched orbital momentum, manifesting in uniaxial magnetic anisotropy. The compass needle ...
