Quantum biology is the study of applications of quantum mechanics and theoretical chemistry to biological objects and problems. Many biological processes involve the conversion of energy into forms that are usable for chemical transformations, and are quantum mechanical in nature. Such processes involve chemical reactions, light absorption, formation of excited electronic states, transfer of ...

However, uncontrolled autophagy will ultimately lead to the death of the cell and may contribute to I/R injury. Morphologically (Fig. 6.4), autophagy begins with the expansion of an isolation membrane, or phagophore, around the cell compartment/organelle to be processed (Gottlieb and Mentzer, 2010; He and Klionsky, 2009; Levine and Kroemer ...

### Cell Biology of Ischemia/Reperfusion Injury

In genetics, an operon is a functioning unit of DNA containing a cluster of genes under the control of a single promoter. The genes are transcribed together into an mRNA strand and either translated together in the cytoplasm, or undergo splicing to create monocistronic mRNAs that are translated separately, i.e. several strands of mRNA that each encode a single gene product.

The tumor microenvironment is highly complex, and immune escape is currently considered an important hallmark of cancer, largely contributing to tumor progression and metastasis. Named for their capability of killing target cells autonomously, natural killer (NK) cells serve as the main effector cells toward cancer in innate immunity and are highly heterogeneous in the microenvironment.
