sample is time-saving. The principal properties of the estimate  $y_{11}$  are outlined in the following theorems. The first two theorems apply to stratified sampling in general and are not restricted to stratified random sampling; that is, the sample from any stratum need not be a simple random sample. 11aeorem S.I.

employment from each sample and use it as an estimate of the population average. It is clear from Table 2.2, that the sample estimates lie within the range of 11 to 57.5. Some samples give a very low figure while some others give a high estimate. But the average of all the sample estimates is 27, which is the true average of the population.

### SAMPLING TECHNIQUES INTRODUCTION

Sample preparation refers to a family of solid/liquid handling techniques to extract or to enrich analytes from sample matrices into the final analyte solution. While SP techniques are well documented, few references address the specific requirements for drug product preparations, which tend to use the simple "dilute and shoot" approach.

The general recommendation is that the best overall sample preservation technique is storage at sub-zero temperatures (USEPA 1979, Florence and Batley 1980, Klingaman and Nelson 1976). In cases where this is not possible, filtering is highly desirable to reduce algal and bacterial activity (Wilson 1974).
