Description. This course covers basic laboratory and analytical skills in archaeology, with emphasis on measurement and measurement error, research design, modelling, sampling, quantification, lab safety, and basic care and handling of archaeological materials. Many of the labs are designed to reinforce or help you understand basic concepts, and that sometimes involves analogies or "made-up" examples.

The Archaeologist's Laboratory: Introduction

Lab. ARH Prog. Anthro. Events. Apart from stratigraphy, the prime archaeological evidence for context comes from spatial relationships, and archaeologists depend on these relationships very heavily for their interpretations of ancient human behavior, site-formation processes, and the meaning of the archaeological record.

The Archaeologist's Laboratory: Spatial Analysis

The Environmental Archaeology Lab, directed by Prof. John M. Marston, is devoted to the study of human interactions with past environments, focusing on the analysis of archaeological plant remains from sites worldwide spanning time from the Paleolithic to the recent historical period.

What does an archaeologist do? - US News Money

Post-excavation analysis constitutes processes that are used to study archaeological materials after an excavation is completed. Since the advent of "New Archaeology" in the 1960s, the use of scientific techniques in archaeology has grown in importance. This trend is directly reflected in the increasing application of the scientific method to post-excavation analysis. The first step in post-excavation analysis should be to determine what one is trying to find out and what techniques can be used
