The Germ That Causes Cancer

It seems like it's time to change direction, and The Germ That Causes Cancer Handbook offers a fresh perspective. Far from promoting "miracle supplements" that promise much, but deliver very little, this book offers both patients and doctors an idea that science is continually proving to be valid: Perhaps cancer is the result of an often-overlooked germ entering the body's cells and ...

The Germ that Causes Cancer book by Doug A. Kaufmann

Causes Of Germ Cell Cancer Like many other types of cancer, there is no known exact cause of germ cell cancer. Some scientists suggest that during embryogenesis, abnormal relocation of germ cells happens while others propose that these germ cells normally relocate to various sites during this time, carrying within them genetic information and functioning at somatic sites.

While H pylori infection is a major cause of stomach cancer, most people who have these bacteria in their stomachs never develop stomach cancer. There is also some evidence that people with H pylori might have a lower risk of some other types of cancer, although it is unclear exactly what role the bacteria plays in this.

Bacteria that can lead to cancer | American Cancer Society

Genetic Changes and Cancer. Cancer is a genetic disease—that is, cancer is caused by certain changes to genes that control the way our cells function, especially how they grow and divide.. Genes carry the instructions to make proteins, which do much of the work in our cells. Certain gene changes can cause cells to evade normal growth controls and become cancer.
