Like the other square sails such as the lug sails, it does not point upwind as well as the high ratio triangular marconi rig. Adding a jib to the sprit sail rig improves the sail when heading upwind. The boom can lift in a gust of wind. I've grown used to how it feels and can control it but when it first happens it is a surprise.

The amazing Spritsail, a forgotten jewel.

Sail shape is usually controlled by lines that pull at the corners of the sail, including the outhaul at the clew and the downhaul at the tack on fore-and-aft rigs. The orientation of sails to the wind is controlled primarily by sheets , [6] but also by braces , which position the yard arms with respect to the wind on square-rigged vessels.

Rigging - Wikipedia

The purpose of the mizzen sail in a ketch rig, unlike the mizzen on a yawl rig, is to provide drive to the hull. A ketch rig allows for shorter sails than a sloop with the same sail area, resulting in a lower center of sail and less overturning moment.

Sail plan - Wikipedia

Square rig is a generic type of sail and rigging arrangement in which the primary driving sails are carried on horizontal spars which are perpendicular, or square, to the keel of the vessel and to the masts. These spars are called yards and their tips, beyond the last stay, are called the yardarms.
